

## New Minegrid® an innovation in Coal Mine Rib Mesh.

HUESKER Australia today announces the introduction of a new Minegrid® set to change the installation of Rib Mesh.

Continuing our 15+ years of Rib Mesh supply to Coal Mines in Australia, HUESKER Australia is constantly looking at improvements and innovations to facilitate a better solution and result for our customer and partners.

Our many years of practical experience and customer feedback has provided HUESKER with the insight required for the development of our new 20/20-55 Minegrid Rib Mesh. The new addition to our product portfolio provides the strength required for this critical application and as a result of the new unique raw material utilized the 20/20-55 Rib Mesh material will not wrap around or damage any equipment.

Close collaboration with our customers led to the rapid and successful development of our new HUESKER Minegrid® 20/20-55.

HUESKER Minegrid 20/20-55 has all the advantages of our existing Rib Mesh materials

- lightweight – at 165g per m<sup>2</sup> almost half the weight of our existing Rib Mesh material
- no memory, making it safe to roll and unroll, maneuver and install
- traditional Bright Yellow polymer coating
- Roll Dimensions 5m x 300m

The first shipment of our unique 20/20-55 Rib Mesh material arrived in Australia in March 2019, HUESKER Australia looks forward to changing the face of Rib Mesh in Australia. Contact your local HUESKER Business Manager today for further information.
